NEW Products | KL357X Series – Instantly Add “Light” Wherever You Need It

KL357X series 小型でシンプルな照明ユニット

From internal illumination of industrial equipment and devices to indicator or decorative lighting, the KL357X Series meets a wide range of application needs.

Development Background – Making “Just a Little Light” Much Easier

In equipment development, there are many situations where “a little light” is needed — such as to make operating states easier to see or to gently illuminate the inside of a housing.

However, in practice, these simple lighting needs often require PCB design, enclosure modification, and mounting structure consideration — leading to unexpected design costs, time, and effort.

To solve these challenges, **Shinko Electronics** developed the **KL357X Series**.

With its *easy connection* and *dust-resistant construction*, this LED package simplifies the integration of lighting into your design. It allows you to easily install illumination wherever it's needed.
